

PRODUCT REQUIREMENTS DOCUMENT

HR & Payroll Management System

Screen-by-Screen Functional Specification

Version 1.1 | Draft

Prepared for internal product & engineering review

Table of Contents

- 1. Document Overview
- 1.5 Revision History (v1.0 → v1.1)
- 2. Information Architecture / Sidebar Navigation
- 3. Screen 01 — Login
- 4. Screen 02 — Dashboard
- 5. Screen 03 — Staff: Employee List
- 6. Screen 04a — Staff: Add Employee (Regular / Contract)
- 6.1 Screen 04b — Staff: Bulk Excel Upload (Regular / Contract)
- 7. Screen 05 — Employee Profile: Profile Tab
- 8. Screen 06 — Employee Profile: Attendance Tab
- 9. Screen 07 — Employee Profile: Salary Overview Tab
- 10. Screen 08 — Employee Profile: Loans Tab
- 10.1 Screen 08a — Add Loan
- 10.2 Screen 08b — Deduct Loan
- 11. Screen 09 — Employee Profile: Expense Claims Tab
- 12. Screen 10 — Employee Profile: Leaves Tab
- 13. Screen 11 — Employee Profile: Document Center Tab (Personal & Custom Documents)
- 14. Screen 12 — Employee Actions Menu
- 15. Screen 13 — Add Fine
- 16. Screen 14 — Employee Activation / Deactivation / Delete Staff
- 17. Screen 15 — Attendance Module Dashboard
- 18. Screen 16 — Attendance: Edit Attendance
- 19. Screen 17 — Reports: Report Center
- 20. Screen 18 — Reports: Employee 360 Report
- 21. Screen 19 — Payments: Salary Processing
- 22. Screen 20 — Payroll Module
- 22.1 Screen 20a — Payroll Overview
- 22.2 Screen 20b — Payroll Calculation
- 22.3 Screen 20c — Payroll Earnings & Deductions
- 22.4 Screen 20d — Payroll Payments
- 22.5 Screen 20e — Roster Management
- 23. Cross-Screen Business Rules
- 24. Open Questions & Assumptions

1. Document Overview

1.1 Purpose

This PRD translates the supplied module outline for the HR & Payroll Management System into a screen-by-screen functional specification. Each screen section defines its purpose, layout elements, data fields, user actions, business rules, and navigation flow so that design and engineering can build against a single source of truth.

1.2 Scope

Covers the following modules as provided: Dashboard, Staff, Attendance, Reports, Payments, and Payroll (partial — see Section 22). Modules referenced in the sidebar but not yet detailed in source material — Payroll (full), Others, Cashbook, Help, Settings, and Interview Schedule — are listed for completeness in the navigation map but are out of scope for detailed screen specs until source content is provided.

1.3 Primary User

HR Administrator / HR Executive, operating on a desktop web application. Employees are the subjects of records but this document assumes an HR-facing admin console (an employee self-service portal, if it exists, is not covered by the source material).

1.4 How to Read This Document

- Each screen begins with a coloured tag (e.g. SCR-02) used as a stable reference ID for design files, tickets, and QA test cases.
- “Fields / Data Displayed” tables describe what the screen shows or captures — not final API contracts.
- “Business Rules” capture logic implied or explicitly stated in the source outline.
- “Open Questions” inline callouts flag gaps that need product/stakeholder clarification before build.

1.5 Revision History (v1.0 → v1.1)

This revision incorporates stakeholder markups and clarifications received on the v1.0 draft. Updated or newly added content is called out below by screen.

Screen	Change
SCR-03	Added an “OT (Overtime)” indicator to the Attendance Status legend.
SCR-04	Split into SCR-04a (Add Employee) and SCR-04b (Bulk Excel Upload), each now handling Regular and Contractual staff as separate flows/templates.
SCR-06	Added “OT (Overtime)” as a calendar status; renamed “SMS Functionality” to “SMS / Mail Functionality” (alerts now go by SMS and/or email).
SCR-08	Expanded with two new sub-screens: SCR-08a Add Loan and SCR-08b Deduct Loan.
SCR-11	Expanded into two record types: Personal Documents and Custom Documents, each with its own field set.
SCR-12	Flagged for stakeholder review — the original Actions Menu description needs a clarification pass; see Open Questions.
SCR-14	Renamed to “Employee Activation / Deactivation / Delete Staff”; added a Delete Staff flow and a Deleted Staff list.
SCR-15	Added Overtime Hours, Punched In, and Punched Out to the Attendance Module Dashboard

Screen	Change
	metrics.
SCR-17	Added Bonus, Allowance, and OT reports under Payroll Reports; added a new Loan Summary Report; added ESI, PF (Excel), and PT reports under Compliance Reports; added Advance Salary, Daily Work Entry, Employee Exit, Employee Salary Structure, Probation Period, and HR MIS reports under Miscellaneous.
SCR-18	Added PF and ESI to the Employee 360 Report contents list.
SCR-20	Payroll Module fully specified for the first time, with five sub-screens: Payroll Overview, Payroll Calculation, Payroll Earnings & Deductions, Payroll Payments, and Roster Management, plus Salary Type and Staff Type filter structures.

NOTE: Several stakeholder comments referenced reference images (bulk upload templates, add/deduct loan screens, document center screens, punch in/out screens, HR MIS report layout, and payroll screens) that were not included as attachments in this pass. Textual requirements from those comments have been incorporated below; visual/layout detail from the images is still pending and is called out per screen.

2. Information Architecture / Sidebar Navigation

The application uses a persistent left sidebar as the primary navigation surface across all screens.

Order	Menu Item	Detailed in this PRD?
1	Dashboard	Yes — Section 4
2	Staff	Yes — Sections 5–16
3	Attendance	Yes — Sections 17–18
4	Reports	Yes — Sections 19–20
5	Payments	Yes — Section 21
6	Payroll	Yes — Section 22 (structure confirmed; some field-level detail pending reference images)
7	Others	Not detailed — no source content provided
8	Cashbook	Not detailed — no source content provided
9	Help	Not detailed — no source content provided
10	Settings	Not detailed — no source content provided
11	Interview Schedule	Not detailed — no source content provided (referenced as a Dashboard widget only)

NOTE: Modules marked “not detailed” appear in the sidebar per the source outline but have no accompanying field-level or flow-level description. Recommend a follow-up content pass before design begins on those modules.

SCR-01 Login

Module	System / Authentication
Entry Point	Application URL (unauthenticated)
Exit Point	Dashboard (SCR-02)

Purpose

Authenticates the HR user before granting access to the sidebar and all downstream modules. The source outline does not detail this screen explicitly, but it is the implied entry point of the Dashboard Flow (“Login → Dashboard”).

Navigation Flow

User opens application

Enter credentials

Submit

Dashboard (SCR-02)

NOTE: Field-level detail (username vs. email, password rules, forgot-password, MFA) is not present in the source material. Flagged in Section 24 — Open Questions.

SCR-02 Dashboard

Module	Dashboard
Purpose	Real-time overview of the entire HR system
Entry Point	Post-login landing screen; “Dashboard” sidebar item
Exit Point	Any module, via widget click-through

Widgets Displayed

The dashboard surfaces the following at-a-glance metrics as individual widgets/cards:

#	Widget	Likely Data Source Module
1	Total Employees	Staff
2	Active Employees	Staff
3	Inactive Employees	Staff
4	Present Today	Attendance
5	Absent Today	Attendance
6	Half Day	Attendance
7	Late Login	Attendance
8	Early Logout	Attendance
9	Employees on Leave	Attendance / Leaves
10	Overtime Hours	Attendance
11	Pending Salary Payments	Payments
12	Expense Claims	Staff (Expense Claims tab)
13	Loan Requests	Staff (Loans tab)
14	Birthday Reminders	Staff
15	Upcoming Holidays	Settings / Calendar
16	Interview Schedule	Interview Schedule module
17	Attendance Alerts	Attendance
18	Recent Activities	System-wide audit/activity feed

User Actions

- View HR summary at a glance on landing.
- Click any widget to navigate directly to the related module, pre-filtered where applicable (e.g. clicking “Absent Today” should open Attendance filtered to today, status = Absent).

Navigation Flow

Login

Dashboard

View HR Summary

Click any widget

Navigate to respective module

Business Rules

- **Real-time data:** Widgets should reflect current-day counts (Present/Absent/Half Day/Late Login/Early Logout) computed from today's attendance records.
- **Click-through mapping:** Every widget must have a defined destination screen; widgets without a clear destination (e.g. "Recent Activities") should open a generic activity log rather than fail silently.

SCR-03 Staff: Employee List

Module	Staff
Purpose	Maintain employee information throughout the employee lifecycle; primary directory of all staff
Entry Point	“Staff” sidebar item
Exit Point	Employee Profile (SCR-05 series) on row select; Add Employee / Bulk Upload modal

Layout Elements

Top Dropdown (Staff Type Toggle)

- Regular
- Contract

Primary Buttons

- Add Employee
- Bulk Excel Upload
- Export Excel

Filters

- Staff Type
- Shift
- Department
- Corporate

Corporate Filter — Sub-options

- Unassigned
- CAD Studio
- Maintenance
- Packing
- Sales

Production Filter — Sub-options

- Pre Casting
- Casting
- Post Casting
- Supervisor
- Unassigned

Employee List Table Columns

Column	Description
Staff ID	Unique employee identifier
Staff Name	Full name of employee

Column	Description
Phone Number	Primary contact number
Attendance Status	Today's live status — see indicator legend below
Salary Cycle	Employee's configured salary cycle
Staff Type	Regular / Contract
Shift	Assigned shift
Settings Template	Applied settings/attendance template
Actions	Row-level action menu (see SCR-12 Employee Actions Menu)

Attendance Status Indicators

Each row's Attendance Status column uses colour-coded indicators:

-  Present
-  Absent
-  Half Day
-  Late Login
-  On Leave
- **(OT)** Overtime — shown as a badge alongside the day's status when the employee logged overtime hours

User Actions

- Toggle between Regular / Contract staff lists.
- Filter by Staff Type, Shift, Department, and Corporate (with nested sub-filters for Corporate and Production areas).
- Click “Add Employee” to create a new record.
- Click “Bulk Excel Upload” to import multiple employees.
- Click “Export Excel” to download the current filtered list.
- Click a row / Staff Name to open that employee's Profile (SCR-05).

Business Rules

- **Filter combination:** Staff Type, Shift, Department, and Corporate filters should be combinable (AND logic) rather than mutually exclusive.
- **Export respects filters:** “Export Excel” should export the currently filtered/visible list, not the entire unfiltered database, unless otherwise specified.

SCR-04a Staff: Add Employee (Regular / Contract)

Module	Staff — Regular Staff and Contractual Staff
Purpose	Create a single employee record
Entry Point	“Add Employee” button on SCR-03
Exit Point	Opens the new employee's Profile (SCR-05)

Add Employee (Single Record)

Captures the same fields defined in the Employee Profile — Profile Information, General Information, Employment Information, and Bank Details (see SCR-05 for the full field list). The form should follow the currently selected Staff Type toggle on SCR-03 (Regular or Contract) and pre-set Employee Type accordingly. On save, the new employee is created and the user is taken to that employee's Profile screen.

Business Rules

- **Type-aware fields:** Some fields may differ between Regular and Contract employees (e.g. contract end date, salary cycle options) — the exact field-level differences are not detailed in the source and should be confirmed with stakeholders.

SCR-04b Staff: Bulk Excel Upload (Regular / Contract)

Module	Staff — Regular Staff and Contractual Staff
Purpose	Create many employee records at once via Excel import
Entry Point	“Bulk Excel Upload” button on SCR-03
Exit Point	Returns to Staff: Employee List (SCR-03), filtered to the imported batch

Two Separate Upload Flows

Bulk upload is required for both staff types, each with its own template, since Regular and Contractual employees carry different field sets (e.g. contract duration, salary cycle):

- Regular Staff Bulk Upload — template and validation rules for permanent/regular employees.
- Contractual Staff Bulk Upload — template and validation rules for contract employees.

Flow (both types)

- User selects Regular or Contract upload mode.
- User downloads/uses the corresponding Excel template.
- User uploads the completed file.
- System validates and imports records, creating new employee profiles for each valid row.

Business Rules

- **Validation:** Bulk upload should validate required fields (e.g. Employee ID, Name, DOJ) per staff type and surface row-level errors rather than failing the entire batch silently.
- **Template separation:** The Regular and Contract templates should be versioned/labelled separately so HR cannot accidentally upload one type’s file into the other’s flow.

NOTE: A reference image for the Regular and Contractual bulk-upload templates was mentioned by the stakeholder but not included in this content pass. The exact column layout and validation rules for each template still need to be confirmed once that reference is available.

Employee Profile — Tabbed Screen Group

Selecting an employee from the Staff list (SCR-03) opens the Employee Profile, a tabbed screen with the following tabs. All tabs share the same employee context header (photo, name, ID) and the same top-level Actions Menu (SCR-12).

Employee Profile Flow

Tabs

- Profile
- Attendance
- Salary Overview
- Loans
- Expense Claims
- Leaves
- Document Center

NOTE: *Navigation Requirement (applies to the entire Employee Profile group): if HR is viewing an employee profile and edits attendance or salary, the application must return to the same employee page, not back to the employee list.*

SCR-05 Employee Profile — Profile Tab

Module	Staff → Employee Profile
Purpose	Central record of an employee's personal, employment, and banking details
Entry Point	Default tab when opening an Employee Profile from SCR-03

Profile Information

- Employee Photo
- Name
- Employee ID
- Phone
- Email

General Information

- Date of Birth (DOB)
- Gender
- Address
- Emergency Contact

Employment Information

- Date of Joining (DOJ)
- Department
- Shift
- Designation
- Reporting Manager
- **Employee Status:** Active / Inactive
- **Employee Type:** Contract / Regular

Bank Details

- Bank Name
- Account Number
- IFSC
- UPI

Salary Calculation Rule

Fixed salary is calculated based on a standard 30-day month for all employees, regardless of the actual number of calendar days in that month.

Business Rules

- **Status-driven behaviour:** Employee Status (Active/Inactive) should govern eligibility for attendance capture, payroll processing, and dashboard “Active/Inactive” counts.
- **Single source of bank truth:** Bank Details entered here should be the same record surfaced under “Staff Bank Details” in the Actions Menu (SCR-12).

SCR-06 Employee Profile — Attendance Tab

Module	Staff → Employee Profile
Purpose	View and manage an individual employee's attendance history

Layout Elements

Monthly Calendar View

Every employee profile includes a monthly calendar showing day-by-day status:

- Present
- Leave
- Holiday
- Half Day
- Late Login
- Absent
- OT (Overtime)

Attendance Supervisor

Every employee profile should display the assigned Attendance Supervisor for that employee.

SMS / Mail Functionality

HR can trigger an SMS and/or email notification to the employee directly from this tab for the following events:

- Half Day
- Late Login
- Absent

User Actions

- View any month's attendance calendar for the employee, including OT-tagged days.
- Send an SMS and/or email alert for Half Day, Late Login, or Absent events.
- Edit an attendance entry (see cross-reference to SCR-16 Attendance: Edit Attendance).

Business Rules

- **Return-to-profile rule:** Per the global Navigation Requirement, saving an attendance edit from this tab must return the user to this same employee's profile, not the Staff list.

SCR-07 Employee Profile — Salary Overview Tab

Module	Staff → Employee Profile
Purpose	View the employee's salary structure and payment history

The source outline does not enumerate specific fields for this tab beyond its presence as a profile tab. Based on the Payments module's salary table (SCR-19), this tab likely surfaces the employee's current salary breakdown (Basic + DA, HRA, deductions, net salary) and links to Payment Logs (see SCR-12 Actions Menu).

NOTE: Field-level detail for this tab is not present in the source material — recommend cross-checking against the Payments Module salary fields (Section 21) and confirming with stakeholders.

Related Actions (via Actions Menu, SCR-12)

- Add Variable Components
- Make Bulk Payments
- Payment Logs

Business Rules

- **Consistency:** Salary figures shown here should reconcile with the Payments Module's Employee Salary Table (SCR-19) for the same employee and salary month.

SCR-08 Employee Profile — Loans Tab

Module	Staff → Employee Profile
Purpose	Track employee loan requests and repayment status
Exit Point	Add Loan (SCR-08a) or Deduct Loan (SCR-08b) sub-windows

Loans surfaces as both a profile tab and a Dashboard widget (“Loan Requests”), implying it supports a request → approval → disbursement → repayment lifecycle. The tab lists all loans for the employee and provides two actions, each opening as a sub-window: Add Loan and Deduct Loan.

Navigation Flow

Employee Profile

Loans Tab

Add Loan (SCR-08a) or Deduct Loan (SCR-08b)

Save

Returns to Loans Tab, list updated

SCR-08a Add Loan

Module	Staff → Employee Profile → Loans Tab
Purpose	Record a new loan issued to the employee
Entry Point	“Add Loan” action on SCR-08, opens as a sub-window
Exit Point	Returns to Loans Tab (SCR-08)

Fields

- Date of Loan Issued
- Loan Amount
- Description
- **SMS / Mail Alert:** toggle to notify the employee that a loan has been added

Business Rules

- **Payroll linkage:** A loan added here should create a repayment schedule that feeds into the Payments Salary Table (SCR-19) and the Payroll Earnings & Deductions screen (SCR-20c).

NOTE: A reference image for the Add Loan sub-window was mentioned by the stakeholder but not included in this content pass. Layout and any additional fields (e.g. tenure, interest, repayment schedule) still need to be confirmed once that reference is available.

SCR-08b Deduct Loan

Module	Staff → Employee Profile → Loans Tab
Purpose	Record a repayment/deduction against an existing employee loan
Entry Point	“Deduct Loan” action on SCR-08, opens as a sub-window
Exit Point	Returns to Loans Tab (SCR-08)

Fields (proposed, pending confirmation)

- Loan Reference (which loan this deduction applies to, where an employee has more than one)
- Date of Deduction
- Deduction Amount
- Remaining Balance (system-calculated)
- **SMS / Mail Alert:** toggle to notify the employee that a deduction has been made

Business Rules

- **Balance tracking:** Each deduction should reduce the loan’s outstanding balance and be reflected in the Loan Summary Report (SCR-17).

NOTE: The stakeholder referenced a Deduct Loan image that was not included in this content pass. The field list above is proposed by mirroring Add Loan’s structure and should be confirmed against that reference.

SCR-09 Employee Profile — Expense Claims Tab

Module	Staff → Employee Profile
Purpose	Track employee-submitted expense claims

Expense Claims also appears as a Dashboard widget, implying claims raised across all employees are aggregated and visible from the Dashboard, while this tab shows the single employee's claim history.

NOTE: *Specific fields (claim category, amount, receipt attachment, approval status) are not detailed in the source outline and should be confirmed with stakeholders before design.*

SCR-10 Employee Profile — Leaves Tab

Module	Staff → Employee Profile
Purpose	View and manage the employee's leave balance and history

Directly related Action Menu item: “Edit Leave Balance” (see SCR-12), confirming this tab is not purely read-only — HR can adjust an employee's leave balance manually.

Related Reports

- Applied Leave Report (Reports module)
- Leave Balance (Reports module)
- Leave Summary (Reports module)

Business Rules

- **Balance edits are logged:** Any manual edit to leave balance via the Actions Menu should be reflected here immediately and should be auditable (ties into Employee 360 Report's Audit Logs).

SCR-11 Employee Profile — Document Center Tab

Module	Staff → Employee Profile
Purpose	Central repository for employee documents

The Document Center is split into two record types, each with its own list and column set: Personal Documents and Custom Documents.

Personal Documents — Columns

Column	Description
Name of the Document	Document title, e.g. Aadhaar, PAN, Passport
Document Type	Category/classification of the document
Added On	Date the document was uploaded
Added By	User who uploaded the document
Attachment	The uploaded file
Actions	View / download / delete / replace

Custom Documents — Columns

Column	Description
Name	Document title, HR-defined
Description	Free-text description of the document
Type	Category/classification of the document
Attachment	The uploaded file
Action	View / download / delete / replace

Business Rules

- **Two distinct lists:** Personal Documents and Custom Documents should be presented as separate lists/sub-tabs within Document Center, not merged into one table, given their differing column sets.

NOTE: Reference images for both the Personal Documents and Custom Documents screens were mentioned by the stakeholder but not included in this content pass. Field labels above reflect the stakeholder's written description; exact layout, required fields, and upload/expiry rules still need to be confirmed once those references are available.

SCR-12 Employee Actions Menu

Module	Staff → Employee Profile
Purpose	Central menu of administrative actions HR can take on a specific employee record
Entry Point	Actions button/menu, available from any Employee Profile tab

NOTE: Stakeholder feedback on the v1.0 draft indicated this section was unclear as written (“could not understand what was given here”). The menu-item table below is retained from v1.0 pending a clarification discussion — recommend a short walkthrough with the stakeholder to confirm each action’s exact behaviour before this screen is finalized for design.

Menu Items

Action	Likely Destination / Effect
Add Variable Components	Adds one-off/variable pay components to the employee’s salary structure
Make Bulk Payments	Initiates payment for multiple employees, possibly launched from this employee’s context
Manage Staff Data	Edit core staff record fields
Staff Bank Details	Opens/edits bank details (Bank Name, Account Number, IFSC, UPI)
Edit Leave Balance	Manually adjust the employee’s leave balance — see SCR-10
Departments	View/change department assignment
Payment Logs	View historical payment records for this employee
Download Reports	Export employee-specific reports
Add Fine	Opens the Add Fine screen — see SCR-13

Business Rules

- **Context-preserving actions:** Per the global Navigation Requirement, completing any of these actions must return the user to the same employee’s profile screen.

SCR-13 Add Fine

Module	Staff → Employee Profile → Actions Menu
Purpose	Apply a disciplinary/payroll fine to an employee for attendance-related infractions
Entry Point	“Add Fine” in the Actions Menu (SCR-12)

Fine Types

- Late Login
- Early Logout
- Long Break
- Excused Break

Business Rules

- **Payroll linkage:** Fines should feed into Other Deductions on the Payments module’s Employee Salary Table (SCR-19).

NOTE: *Fine amount rules (fixed vs. tiered, per-occurrence limits) are not specified in the source outline and should be confirmed with stakeholders.*

SCR-14 Employee Activation / Deactivation / Delete Staff

Module	Staff
Purpose	Change an employee's active/inactive status, or remove the employee record entirely

Requirements

- Immediate Activation
- Immediate Deactivation
- **Delete Staff:** removes the employee from the active Staff list; deleted employees are tracked in a separate Deleted Staff list

Deactivation Flow

Select Employee

Deactivate

Choose Effective Date

Save

Employee becomes inactive

Delete Staff Flow

Select Employee

Delete

Confirm deletion

Save

Employee removed from active Staff list, moved to Deleted Staff list

Business Rules

- **Effective-dated deactivation:** Deactivation requires an effective date; the employee's status should flip to Inactive automatically on that date, even if it is in the future, rather than only on manual save.
- **Immediate activation:** Activation is described as immediate — no effective-date step, unlike deactivation. Confirm whether activation should also support future-dating.
- **Downstream effects:** Deactivation should exclude the employee from active attendance capture and future payroll runs while preserving historical records.
- **Delete vs. Deactivate:** The stakeholder's note flagged uncertainty about whether "Delete" should be a hard delete (record fully removed) or a soft delete (record hidden from the active list but retained in a Deleted Staff list, as described). This PRD assumes the latter — a recoverable soft delete — since it preserves historical

attendance, payroll, and audit data; recommend confirming this with the stakeholder before build, given the explicit “please correct this if needed” flag.

- **Deleted Staff list:** Should remain searchable/viewable by HR (e.g. for historical reports or restoring a record) even though the employee no longer appears in the main Staff list (SCR-03).

SCR-15 Attendance Module Dashboard

Module	Attendance
Purpose	Organization-wide attendance summary and management
Entry Point	"Attendance" sidebar item

Metrics Displayed

Metric	Metric
Total Staff	Late Login (implied via Login Time)
Present	Logout Time
Absent	Attendance Balance
Active	Overtime Hours
Inactive	Leaves
Half Day	Punched In (live count of employees currently clocked in)
Punched Out (live count of employees who have clocked out today)	

Punched In / Punched Out

In addition to the summary counts above, the dashboard should support a Punched In / Punched Out view showing which employees are currently clocked in versus already clocked out for the day, likely as a clickable drill-down from the two metrics.

Business Rules

- **Consistency with Dashboard widgets:** Present/Absent/Half Day/Overtime figures here should match the corresponding widgets on the main Dashboard (SCR-02) for the same day.
- **Live punch counts:** Punched In and Punched Out counts should update in real time (or near real time) as employees clock in/out through the day.

NOTE: Reference images for the Punched In and Punched Out views were mentioned by the stakeholder but not included in this content pass. Exact layout (e.g. list vs. count-only tile, drill-down behaviour) still needs to be confirmed once those references are available.

SCR-16 Attendance: Edit Attendance

Module	Attendance
Purpose	View and correct a specific day's attendance record

Navigation Flow

Attendance

Select Date

View Attendance

Edit if necessary

Save

Attendance Updated

Business Rules

- **Return-to-context rule:** If this edit is initiated from an Employee Profile (SCR-06), saving must return the user to that same employee's profile page rather than the Attendance module landing screen.
- **Audit trail:** Edits to attendance should be logged, since Attendance is included in the Employee 360 Report's Audit Logs section.

SCR-17 Reports: Report Center

Module	Reports
Purpose	Central hub to generate, preview, and export all organizational reports
Entry Point	"Reports" sidebar item

Available Reports

Attendance Reports

- Attendance Report
- Daily Attendance
- Punch Report
- Punch In / Punch Out
- Multi Punch Report
- Shift Attendance
- Shift Performance
- Score Card
- Muster Roll

Leave Reports

- Applied Leave Report
- Leave Balance
- Leave Summary

Payroll Reports

- Payroll Report
- Bonus Report
- Allowance Report
- OT (Overtime) Report

Loan Summary Report

A dedicated report on employee loans across the organization.

Column	Description
S.No	Row serial number
Emp ID	Employee identifier
Staff Name	Employee full name
Total Loan Amount	Sum of all loans issued to the employee
Paid Amount	Amount repaid so far
Pending Amount	Outstanding balance

- **Repayment timeline:** Loan repayment schedules should support a minimum term of 3 months and a maximum term of 6 months.

Asset Reports

- Asset Assignment
- Asset Inventory

Compliance Reports

- Audit Report
- Compliance Report
- ESI Report
- **PF Report:** exported in Excel format
- PT (Professional Tax) Report

Miscellaneous

- Miscellaneous Report
- **Employee 360 Report:** a special composite report — see SCR-18
- Advance Salary Report
- Daily Work Entry Report
- Employee Exit Report
- Employee Salary Structure Report
- Probation Period Report

HR MIS Report

A management-information summary report with the following columns:

Column	Description
Staff Name	Employee full name
Staff Type	Regular / Contract
Deactivate / Deleted Date	Date the employee was deactivated or deleted, if applicable
CTC	Cost to Company
Gross	Gross salary

NOTE: A reference image for the HR MIS Report layout was mentioned by the stakeholder but not included in this content pass. The column list above reflects the stakeholder's written description and should be confirmed once that reference is available.

Navigation Flow

Reports

Choose Report

Apply Filters

Generate

[Preview](#)[Download \(PDF / Excel / CSV\)](#)

Business Rules

- **Export formats:** Every report must support export to PDF, Excel, and CSV.
- **Filter-then-generate:** Filters must be applied before generation; preview should reflect the filtered result set prior to download.

SCR-18 Reports: Employee 360 Report

Module	Reports
Purpose	Single composite report containing the complete record for one employee
Entry Point	Selected from the Report Center (SCR-17); may also be reachable via “Download Reports” in the Employee Actions Menu (SCR-12)

Contents

- Employee Profile
- Attendance
- Leave
- Salary
- Loan
- Expense Claims
- Documents
- Assets
- Fines
- Overtime
- Payroll
- Bank Details
- Payment History
- Performance
- Shift History
- Audit Logs
- PF
- ESI

Business Rules

- **Completeness:** This report should pull live data from every module listed above at generation time — it is the system’s single most comprehensive export and a useful QA checklist for data consistency across modules.

SCR-19 Payments: Salary Processing

Module	Payments
Purpose	Salary processing and payment management
Entry Point	"Payments" sidebar item

Employee Salary Table — Columns

Column	Description
S.No	Row serial number
Employee Name	Employee full name
UAN Number	Universal Account Number (PF)
ESI Number	Employee State Insurance number
Current Salary	Configured current salary
Due Amount	Outstanding amount to be paid
Basic + DA	Basic pay plus Dearness Allowance
HRA	House Rent Allowance
Total Salary	Sum of salary components before pro-ration
Number of Days	Days counted for this pay cycle
Earned Salary	Salary earned based on Number of Days
Earned Basic	Basic pay earned based on Number of Days
Earned HRA	HRA earned based on Number of Days
PF Deduction	Provident Fund deduction
ESI Deduction	ESI deduction
Other Deductions	Includes fines and other adjustments (see SCR-13)
Net Salary	Final payable amount after all deductions

Navigation Flow

Payments

Select Salary Month

View Employees

Calculate Salary

Approve

Make Payment

Payment Log Created

Business Rules

- **30-day base:** Salary calculation is based on a fixed 30-day month (per SCR-05 Salary Calculation rule), and “Number of Days” / “Earned Salary” fields should be derived using that same 30-day base for consistency.
- **Approval gate:** Salary must be Calculated and Approved before “Make Payment” is enabled — payments should not be issued directly from a calculated-but-unapproved state.
- **Payment Log creation:** Every completed payment run automatically creates a Payment Log entry, visible both here and per-employee via the Actions Menu (SCR-12).
- **Deductions rollup:** Other Deductions should aggregate any fines added via Add Fine (SCR-13) for the relevant salary month.

SCR-20 Payroll Module

Module	Payroll
Purpose	End-to-end payroll processing: overview, calculation, earnings/deductions, payments, and roster-driven scheduling
Entry Point	“Payroll” sidebar item
Status	Structure confirmed by stakeholder; screen-level field detail still pending referenced images

Payroll is organized into five sub-screens, all sharing a common Salary Type / Staff Type filter panel described below.

- Payroll Overview (SCR-20a)
- Payroll Calculation (SCR-20b)
- Payroll Earnings & Deductions (SCR-20c)
- Payroll Payments (SCR-20d)
- Roster Management (SCR-20e)

Shared Filter Panel

Applies across the Payroll sub-screens:

- **Salary Type filter:** filters the payroll view by how staff are paid — see Salary Type breakdown below.
- **Staff Type filter:** Corporate or Production, mirroring the Staff module's (SCR-03) department filters for consistency.

Staff Type — Corporate Sub-filters

- CAD Studio
- Maintenance
- Unassigned
- Sales
- Packing

Staff Type — Production Sub-filters

- Casting
- Pre Casting
- Post Casting
- Supervisor
- Unassigned

Salary Type Structure

Salary Type is defined per employment category, each supporting five pay-basis options:

Employment Category	Pay-Basis Options
Contract	Hourly, Daily, Weekly, Monthly, Work Basis
Regular	Hourly, Daily, Weekly, Monthly, Work Basis

Business Rules

- **Filter consistency:** The Corporate/Production department taxonomy here should be identical to the one used on the Staff List (SCR-03) so payroll and staff filtering stay in sync.
- **Pay-basis drives calculation:** The selected Salary Type (Hourly / Daily / Weekly / Monthly / Work Basis) should determine how Payroll Calculation (SCR-20b) computes Earned Salary for that employee, rather than always defaulting to the 30-day monthly base used elsewhere (see Section 23 for how this interacts with the global 30-day rule).

NOTE: The stakeholder indicated reference images exist for the Payroll screens (calculation, overview, earnings/deductions, payments, roster) but these were not included in this content pass. The five sub-screens below are scoped from the stakeholder's written structure; detailed field/column layouts still need confirmation against those images before this module is design-ready.

SCR-20a Payroll Overview

Module	Payroll
Purpose	Snapshot/landing view of payroll status across the organization for a selected period
Entry Point	Default sub-screen when opening Payroll

Expected to function as the Payroll module's equivalent of the Dashboard (SCR-02) — a summary view showing headline payroll figures (e.g. total payroll cost, employees processed vs. pending, upcoming payment runs) filterable by the shared Salary Type / Staff Type panel.

NOTE: *Specific widgets/metrics for this screen are pending the referenced Payroll Overview image.*

SCR-20b Payroll Calculation

Module	Payroll
Purpose	Compute each employee's payroll for a selected period based on their Salary Type / pay basis

Calculates Earned Salary per employee according to their configured pay basis (Hourly, Daily, Weekly, Monthly, or Work Basis) rather than a single fixed formula, unlike the flat 30-day calculation described for the Payments module (SCR-19). This screen likely reads attendance and roster data as its calculation inputs.

Business Rules

- **Pay-basis-specific formulas:** Each of the five pay-basis options likely needs its own calculation rule (e.g. Hourly = hours worked × rate; Monthly = the existing 30-day logic). Exact formulas are not yet specified and should be confirmed with stakeholders.

NOTE: Field-level layout for this screen is pending the referenced Payroll Calculation image.

SCR-20c Payroll Earnings & Deductions

Module	Payroll
Purpose	Breaks down each employee's payroll into earning components and deduction components for the period

Expected to consolidate earnings (basic, DA, HRA, allowances, bonus, OT) and deductions (PF, ESI, PT, fines, loan repayments, other deductions) per employee, feeding both the Payroll Payments screen (SCR-20d) and the related reports (Bonus, Allowance, OT, ESI, PF, PT — see SCR-17).

Likely Earnings Inputs

- Basic + DA, HRA (per SCR-19 salary structure)
- Allowances
- Bonus
- Overtime (OT)

Likely Deduction Inputs

- PF Deduction
- ESI Deduction
- PT (Professional Tax) Deduction
- Fines (see SCR-13)
- Loan Deductions (see SCR-08b)
- Other Deductions

Business Rules

- **Single source for deductions:** Fines and loan deductions entered elsewhere in the system (SCR-13, SCR-08b) should flow into this screen automatically rather than requiring re-entry.

NOTE: Exact column layout for this screen is pending the referenced Payroll Earnings & Deductions image; the earnings/deductions lists above are inferred from related modules and reports, not confirmed field names.

SCR-20d Payroll Payments

Module	Payroll
Purpose	Execute and track the actual disbursement of calculated payroll

Expected to mirror the Payments module's approval-then-pay pattern (SCR-19: Calculate → Approve → Make Payment → Payment Log Created), applied at the Payroll module level across all Salary Types and Staff Types rather than a single monthly salary run.

Navigation Flow (proposed)

Payroll

Payroll Calculation (SCR-20b)

Payroll Earnings & Deductions (SCR-20c)

Payroll Payments (SCR-20d)

Approve

Make Payment

Payment Log Created

NOTE: Field-level layout for this screen is pending the referenced Payroll Payments image; the flow above is proposed by analogy with SCR-19 and should be confirmed with stakeholders.

SCR-20e Roster Management

Module	Payroll
Purpose	Schedule and manage employee shift rosters that feed payroll calculation

Roster Management is grouped under Payroll, implying shift/roster assignments (rather than just the static Shift field on the Employee Profile, SCR-05) directly drive Payroll Calculation — particularly relevant for Hourly, Daily, and Weekly pay-basis employees.

Business Rules

- **Roster-to-payroll linkage:** Roster assignments should be a calculation input for Payroll Calculation (SCR-20b), especially for non-Monthly pay bases.

NOTE: Field-level layout for this screen is pending the referenced Payroll image; roster assignment fields (shift patterns, date ranges, employee-to-shift mapping) are not yet specified and should be confirmed with stakeholders.

23. Cross-Screen Business Rules

- **Global Navigation Requirement:** Any edit to attendance or salary made from within an Employee Profile must return the user to that same employee's profile page, not the Staff list. This applies to SCR-06, SCR-07, SCR-12, and SCR-16 at minimum.
- **Attendance status consistency:** The attendance indicator legend (Present / Absent / Half Day / Late Login / On Leave, plus the OT badge) used on the Staff List (SCR-03) should be the same taxonomy used in the Employee Profile calendar (SCR-06) and the Attendance Module Dashboard (SCR-15).
- **30-day salary base, with pay-basis exceptions:** Fixed/Monthly salary math — Profile tab (SCR-05) and the Payments table (SCR-19) — should consistently use a 30-day month. Payroll Calculation (SCR-20b), however, must branch by Salary Type (Hourly/Daily/Weekly/Monthly/Work Basis) rather than always applying the 30-day rule; this distinction should be confirmed with stakeholders since it is currently inferred rather than explicitly specified.
- **Fines feed deductions:** Add Fine (SCR-13) entries should always be reflected in Other Deductions on the Payments Salary Table (SCR-19) and in Payroll Earnings & Deductions (SCR-20c).
- **Loans feed deductions:** Add Loan / Deduct Loan (SCR-08a/08b) entries should be reflected in the Payments Salary Table, the Loan Summary Report (SCR-17), and Payroll Earnings & Deductions (SCR-20c).
- **Widget-to-module parity:** Every Dashboard widget (SCR-02) should have a live, matching figure in its corresponding module screen (e.g., Attendance widgets vs. SCR-15, including the new Punched In / Punched Out counts).
- **Corporate/Production taxonomy reuse:** The Corporate and Production department sub-filters defined on the Staff List (SCR-03) are reused as-is on the Payroll module's Staff Type filter (SCR-20) — keep both lists in sync if departments change.
- **Auditability:** Attendance edits, leave balance edits, loan actions, deletions, and payment actions should all be logged and retrievable via the Employee 360 Report's Audit Logs section (SCR-18).

24. Open Questions & Assumptions

The following items are not covered by the source outline and should be clarified with stakeholders before final design/build:

- **Login (SCR-01):** credential type, forgot-password flow, MFA, session/role-based permissions.

- **Salary Overview, Expense Claims tabs (SCR-07, SCR-09):** specific field lists, approval workflows, and validation rules are not detailed in the source and are inferred only from related modules/widgets.
- **Bulk Excel Upload templates (SCR-04b):** exact Regular vs. Contract template columns, validation rules, and error-handling behaviour — stakeholder referenced an image not yet provided.
- **Deduct Loan fields (SCR-08b):** the proposed field list is inferred from Add Loan; needs confirmation against the stakeholder's referenced image.
- **Document Center detail (SCR-11):** upload/expiry rules and file-format restrictions for Personal and Custom Documents are not yet specified.
- **Employee Actions Menu (SCR-12):** flagged directly by the stakeholder as unclear; needs a walkthrough to confirm each action's exact behaviour.
- **Add Fine (SCR-13):** fine amount rules — fixed vs. tiered, caps, approval requirement.
- **Employee Activation (SCR-14):** whether Activation, like Deactivation, should support an effective date rather than being strictly immediate.
- **Delete Staff (SCR-14):** whether deletion should be a soft delete (assumed in this draft) or a hard/permanent delete, as flagged by the stakeholder.
- **Punched In / Punched Out views (SCR-15):** exact layout and drill-down behaviour, pending referenced images.
- **HR MIS Report layout (SCR-17):** column list is confirmed by the stakeholder's notes, but visual layout is pending the referenced image.
- **Payroll Module (SCR-20 series):** structure (Overview / Calculation / Earnings & Deductions / Payments / Roster Management, plus Salary Type and Staff Type filters) is now confirmed, but detailed field/column layouts for each sub-screen are pending the stakeholder's referenced Payroll images.
- **Pay-basis calculation formulas (SCR-20b):** how Hourly, Daily, Weekly, and Work Basis pay types are each calculated is not yet specified beyond the existing Monthly/30-day rule.
- **Roles & permissions:** no role hierarchy (e.g., HR Admin vs. HR Executive vs. Manager) is defined in the source outline; assumed single HR-admin role throughout this document.
- **Others, Cashbook, Help, Settings, Interview Schedule:** sidebar items with no accompanying screen detail in the source outline.

PRODUCT REQUIREMENTS DOCUMENT

HR & Payroll Management System

Revision Pack — screenshot-derived specification updates

Version 1.2 · Draft · merges into master PRD (v1.1)

Prepared for internal product & engineering review.
Scope: locks the sections previously marked *pending* — *image not yet provided*, keyed to existing screen IDs (SCR-xx).

Purpose: This pack converts the reference screenshots into drop-in specification detail for the sections that were marked *pending — image not yet provided* in v1.1. Each entry is keyed to the existing screen ID so it can be merged straight into the master PRD.

Source images used: 13 of the 15 supplied. Images 14–15 ("Silver Age 92.5" rate list and terms & conditions) belong to a jewellery project and are **excluded** — they are not part of this system.

Image → screen map

Image	Resolves
1	SCR-07 / SCR-20c — component picker, Payments category (Add Payment / Recover Payment)
2	SCR-07 / SCR-20c — component picker, Earnings category (Allowance / Bonus)
3	SCR-07 — Salary Overview header actions
4	SCR-07 — Salary Overview monthly detail card
5	SCR-17 — HR MIS Report layout
6	SCR-17 — Loan Summary Report layout
7	SCR-15 — Attendance Module Dashboard
8	SCR-12 / SCR-14 — list-level Actions menu (Invite / Deactivate / Delete)
9	SCR-05 — Employee Profile (Profile tab) — significant corrections, see below
10	SCR-11 — Document Centre → Personal Documents
11	SCR-11 — Document Centre → Custom Documents
12	SCR-08a — Add Loan modal
13	SCR-03 / SCR-04a / SCR-04b — Add Staff dropdown

Corrections that change existing v1.1 text (confirm before merge)

These images contradict assumptions the v1.1 draft made from text alone. Flagging them explicitly so they're a deliberate decision, not a silent overwrite.

1. **SCR-05 "General Information" is not personal details.** v1.1 assumed DOB / Gender / Address / Emergency Contact. The actual General Information block is a set of **template assignments + salary config** (Weekly-off, Holiday, Leave, Shift, Attendance-on-Weekly-Off, Geofence, Attendance Settings, Automation Rules, Reimbursement, Payments templates, plus Salary Cycle and Salary Access). Personal details (DOB, gender, address, emergency contact) are not shown on this screen — they may live behind the "Edit" dialog or another tab; needs confirmation.
2. **SCR-05 Profile tab has two more sub-tabs than listed:** the profile sidebar shows **Assets** and **Goals** in addition to the seven tabs already documented, and orders **Leave(s) before Expense Claims**.
3. **SCR-15 has a "Fine hours" metric** not in the v1.1 metric list, plus **Unprocessed Logs**, **Daily Report**, and an **All Approved** status indicator.

4. **SCR-17 HR MIS Report adds a "Staff Status" column** (Active/Inactive) between Staff Type and Deactivated/Deleted Date.
5. **SCR-17 Loan Summary Report shows no Emp ID column** — the actual export is S.No, Staff Name, Total Loan, Paid, Pending only. Also, Pending can go **negative** (overpayment), e.g. one row at -₹2,000.
6. **SCR-08a Add Loan has no tenure/interest/schedule fields** — this closes the v1.1 open question. The loan-entry modal is just Date, Amount, Description, alert toggle. Any repayment-term logic (the 3–6 month rule in SCR-17) is applied elsewhere, not captured at entry.

SCR-03 — Staff: Employee List (Add Staff dropdown) — *Image 13*

The **Add Staff** control is a split dropdown with two parallel tracks:

Track	Description shown	Actions
Regular Staff	"With Salary Components (Basic, HRA, PF, ESI etc.)"	Add Regular Staff · Bulk Excel Add
Contractual Staff	"Only Gross Salary (Monthly, Weekly, Daily, Hourly, Work-Basis)"	Add Contractual Staff · Bulk Excel Add

Additional confirmed elements on this screen: - **Overall Balance** figure with a **Total Pending** label (e.g. – ₹5,18,826.16) rendered top-left. - **Search Staff** field + **Filter** button. - **Select All** checkbox enabling multi-row selection (drives the list-level Actions menu, SCR-12 below).

This locks the SCR-04a/04b entry points: the Regular vs Contractual distinction is a hard fork at creation time, and each fork has its own single-add and bulk-add path.

SCR-04a / SCR-04b — Add Employee & Bulk Upload — *Image 13*

- Regular = component-based salary (Basic, HRA, PF, ESI, ...).
- Contractual = single gross figure on one of five pay bases (Monthly, Weekly, Daily, Hourly, Work-Basis).
- Each type has a **Bulk Excel Add** entry, confirming the two-template requirement from v1.1.

Still pending: the actual **bulk-upload template columns** for each type. Image 5 turned out to be the HR MIS Report, not an upload template. The column layout / validation rules for the Regular and Contractual import files are still unspecified.

SCR-05 — Employee Profile: Profile Tab — *Image 9*

Header: avatar · employee name · staff type + pay basis in parentheses (e.g. "Contractual (Monthly)") · **Actions** ▼ button (top-right).

Left sidebar tabs (confirmed order): Profile · Attendance · Salary Overview · Loans · Leave(s) · Expense Claims · Document Centre · **Assets** · **Goals**.

Profile Information (has its own Edit button):

Field	Notes
Name	
ID	Employee ID (may be blank)
Designation	
Staff Type	Regular / Contractual
Contact Number	
Reporting Manager	
Corporate	Corporate department assignment (ties to SCR-03 Corporate filter)
Production	Production area assignment (ties to SCR-03 Production filter)

General Information (own Edit button) — **template & salary configuration, not personal details:**

Field	Example value
Salary Cycle	1
Weekly-off Template	Default Template-1
Holiday Template	—
Leave Template	Leave Policy (System)
Shift	—
Attendance on Weekly Off Template	—
Geofence Template	—
Attendance Settings Templates	Template 2
Automation Rules Template	—
Reimbursement Template	Default Template
Payments Templates	Default Template
Salary Access	Allow till current cycle

Open items: (a) where DOB / Gender / Address / Emergency Contact / Bank Details actually live (behind Edit? a separate section below the fold?); (b) confirm the full behaviour of the Assets and Goals tabs, which have no source text yet. A "voicelt" voice-assist widget also appears floating bottom-right — confirm whether it's in scope for this PRD.

SCR-07 — Employee Profile: Salary Overview Tab — Images 3, 4, 1, 2

This tab was under-specified in v1.1; the images now define it.

Header actions (Image 3): **Actions** ▾ · **Add Previous Month** · **Generate Salary Slip**.

Monthly detail card (Image 4) — one collapsible card per salary month: - Card header: month label · duration (e.g. "01 June 2026 – 30 June 2026") · **Due Amount** · expand/collapse chevron. - Two-column breakdown — **Earnings** (with **Full** and **Actual** columns) and **Deductions** (**Actual** column):

Line	Meaning
Basic (and other components)	Full (configured) vs Actual (earned)
Gross Earnings	Sum of actual earnings
Total Deductions	Sum of deductions
Carry (prev. month)	Carried-forward balance, e.g. "Carry (May 2026)"
Net Payable Amount	Gross Earnings – Total Deductions; shows Payable Days (e.g. 28.5)
Advance Payments	Amount already advanced
Due Amount	Outstanding for the month

• Card footer actions: **Edit Salary** · **View Variables**.

Component picker (Images 1–2) — reached via Edit Salary / Add component. Three category tabs, each with a **Continue** button:

Tab	Options
Earnings	Allowance · Bonus
Deductions	<i>(list not shown — pending)</i>
Payments	Add Payment · Recover Payment

This picker is shared with the Payroll Earnings & Deductions screen (SCR-20c). "Recover Payment" under the Payments tab is the mechanism behind loan/advance recovery — worth confirming whether "Deduct Loan" (SCR-08b) routes through this same picker rather than a standalone modal.

SCR-08a — Add Loan (modal) — Image 12

Modal titled **"Add Loan Entry"**, sub-labelled with the employee name.

Field	Type	Notes
Date	Date picker	Defaults to today
Amount	Currency (₹)	Required (Add Loan button disabled until entered)
Description (Optional)	Free text	
Send alerts to staff	Checkbox	Default checked

Primary action: **Add Loan**.

Resolved open question: no tenure, interest, or repayment-schedule fields at entry. The 3–6 month repayment-term rule (SCR-17) is not captured here and must be applied by a downstream mechanism — confirm where.

SCR-11 — Document Centre — *Images 10, 11*

Two sub-tabs, each with its own **Search by Name** field and an empty "No Data" state.

Personal Documents (Image 10) — has an **Add Document ▼** button:

Column
Name of Document
Document Type
Added On
Added by
Attachments
Actions

Custom Documents (Image 11):

Column
Name
Description
Type
Attachment
Actions

This confirms the v1.1 column lists for both record types. (Note UK spelling "Document Centre" in the UI.)

SCR-12 / SCR-14 — List-level Actions menu — *Image 8*

The **Actions** ▼ menu shown over selected staff rows contains: - **Invite** (*new — not in v1.1; likely sends an app/self-service invite*) - **Deactivate Staff** - **Delete Staff**

This is the **list/bulk-selection** Actions menu (enabled by Select All / row checkboxes on SCR-03), and is distinct from the per-profile Actions menu documented in SCR-12 (Add Variable Components, Payment Logs, etc.). Recommend the PRD separate these two "Actions" surfaces explicitly: 1. **List-level Actions** (this image): Invite / Deactivate / Delete on selected rows. 2. **Profile-level Actions** (SCR-12): per-employee admin actions.

The **Invite** action is new scope — confirm its target (email/SMS invite to an employee self-service portal or mobile app).

SCR-15 — Attendance Module Dashboard — *Image 7*

Header: "Attendance Summary" title · top-right links **Unprocessed Logs**, **Daily Report** (download), **Settings**.

Controls: date navigator (◀ 16 Jul 2026 ▶) with calendar picker · **All Approved** status pill (green).

Metric tiles (confirmed set):

Metric	
Total Staff	e.g. 147
Present	116
Absent	21
Half Day	0
Overtime Hours	0h 0m
Fine hours	0h 0m — <i>new metric</i>
Leave	0 (with dropdown)
Punched In	107
Punched Out	16

Below tiles: **Bulk Add Attendance** action · Search Staff · **Filter**.

Adds three items not in v1.1: the **Fine hours** metric, the **Unprocessed Logs** view, the **Daily Report** export, and an **All Approved** day-level status. Punched In / Punched Out are confirmed as live count tiles.

SCR-17 — Reports — *Images 5, 6*

HR MIS Report (Image 5) — confirmed columns:

Column	Notes
Staff Name	
Staff Type	Regular / Contractual
Staff Status	Active / Inactive — <i>new column</i>
Deactivated / Deleted Date	
CTC	
Gross	

Header note carried on the report: *CTC/Gross values for Hourly and Daily staff are tentative and subject to stated conditions* (the report should surface this caveat, since those pay bases don't have a fixed monthly figure).

Loan Summary Report (Image 6) — confirmed columns:

Column
S.No
Staff Name
Total Loan
Paid Amount
Pending Amount

Notes: the report is **date-stamped** ("as on DD/MM/YYYY"); **no Emp ID column** in the actual export; **Pending Amount can be negative** (overpayment). Update v1.1's SCR-17 Loan Summary table to drop Emp ID and allow negative pending.

Still pending (no image resolved these)

Screen	What's missing
SCR-04b	Bulk-upload template columns for Regular & Contractual (Image 5 was HR MIS, not a template)
SCR-08b	Deduct Loan modal — no dedicated image; likely routes through the Payments "Recover Payment" picker (Image 1) rather than a standalone modal — confirm
SCR-20a	Payroll Overview widgets/metrics
SCR-20b	Payroll Calculation field layout & pay-basis formulas
SCR-20d	Payroll Payments layout (partially informed by Images 1 & 4)
SCR-20e	Roster Management fields

The salary/component images (1, 2, 4) give partial coverage of the Payroll earnings/deductions/payments logic, but the four dedicated Payroll module screens (Overview, Calculation, Payments, Roster) still need their own captures.
